EDUCATION

Lakeshore State University
Bachelor of Science in Computer Science, Minor in Mathematics
Aug 2022 – May 2026
Chicago, IL

- GPA: 3.7/4.0, Dean's List six semesters
- Relevant Coursework: Data Structures, Algorithms, Operating Systems, Databases, Computer Networks

TECHNICAL SKILLS

Languages: Java, Python, Go, TypeScript, SQL, C
Frameworks: React, Node.js, Flask, JUnit, Pytest
Developer Tools: Git, Docker, AWS, PostgreSQL, Linux

EXPERIENCE

Software Engineer Intern May 2025 – Aug 2025
Ironhaw Freight *Chicago, IL*

- Built a shipment status API in Go to replace nightly CSV exports, so 40 dispatchers see load changes in under 5 minutes
- Wrote integration tests for the billing service, raising coverage from 52% to 81% and catching two rounding bugs
- Moved three cron jobs to AWS Lambda, which lowered the team's monthly EC2 bill by about $1,200
- Added structured logging and a Grafana dashboard that the on-call engineer now checks first during incidents

Undergraduate Teaching Assistant Jan 2024 – May 2025
Lakeshore State University *Chicago, IL*

- Led weekly lab sections of 30 students for Data Structures and held four office hours a week
- Wrote 12 autograded Java exercises in Gradescope that the course still uses every term
- Cut the regrade request backlog from about 60 to under 10 by posting rubric notes after each assignment

IT Support Technician Sep 2022 – Dec 2023
Campus Technology Services *Chicago, IL*

- Resolved about 25 tickets a week for laptops, printers and campus Wi-Fi, keeping first-response time under 2 hours
- Wrote a PowerShell script that set up new lab machines in 15 minutes instead of an hour

PROJECTS

Transit Pulse | *TypeScript, React, Node.js, PostgreSQL* Jan 2025 – Mar 2025

- Built a web app that shows live bus arrivals next to crowding estimates from public ridership data
- Cached feed responses in Redis so the page loads in under 300 ms with 500 simulated users
- Posted it on the campus subreddit, where about 1,100 students used it in the first month

Shelfie | *Python, Flask, SQLite, Docker* Sep 2024

- Made a Flask app that scans book barcodes with a phone camera and tracks loans for 60 dorm residents
- Packaged it with Docker Compose so new maintainers can run it locally with one command

Course Planner | *Java, Spring Boot, MySQL* Apr 2024

- Wrote a scheduler that builds conflict-free weekly timetables from the course catalog in under a second
- Won second place out of 34 teams at the campus hackathon, judged by local engineers
